

xReach.collaboration facilitates efficient cooperation

xReach.collaboration with the Symbio-interface

The xReach.collaboration software module allows your staff members to collaborate in virtual team and project rooms and optimize information-sharing processes, project coordination and approval processes.

Hitachi Solutions has the answer.

With only a few clicks, they can coordinate work steps or structure different file versions, including across departments and locations. With Microsoft SharePoint Online and Azure WebServices as the technical basis, the solution can be scaled flexibly and adjusted to your requirements and the number of staff members. All you need is a SharePoint Standard CAL.

Straightforward and efficient coordination in team and project rooms

Contact information for the members of the project team, appointments, memos and a Wiki – teams can save all of these elements in their virtual project rooms and manage them centrally. This allows all the people involved to be up-to-date at all times. Thanks to standardized templates, it only takes a few steps to set up a team or project room.

Informative and intuitive everything under control in clearly arranged dashboards

With xReach.collaboration, every staff member can view the information that is relevant to him or her. The Management Dashboard provides executives and project managers with detailed information. Project rooms, tasks and user rights are shown in the User Dashboard. The reliable rights management allows your staff members, suppliers or customers to view the content they are authorized to view.

Clear and structured transparent processes with consistent workflows

Use the consistent workflows to standardize approaches and approval processes. News, tasks allocation and approvals by supervisors are synchronized automatically in the project room.

xReach.collaboration is an element of the modular xReach software platform. Users can compile the modules, for example, an ERP system, an online shop or an analysis platform as needed and connect them seamlessly via preconfigured interfaces. You also can link xReach.collaboration with the intranet platform xReach.intranet to optimize the stream of knowledge, in-house communications and collaboration in your company.

Complement
xReach.collaboration with the
Symbio interface

The Symbio process management tool can be integrated seamlessly via an interface. This is how you benefit:

Fast and reliable uninterrupted data synchronization in the project portal

To collaborate successfully as a team, all the members need access to up-to-date data and documents at all times.

The interface with Symbio ensures that the process house structure and all approved processes are transferred to the integrated portals so all the team members can view the current status in real time. The Symbio databases are hosted by software provider Ploetz + Zeller directly in Microsoft's Azure cloud, guaranteeing short routes and response times.

Transparent and traceable new functions for seamless workflows

In addition to the process house structure and the requirements, the tool synchronizes the steps of the process (tasks) to enable you to see what process has been allocated a task and what requirements are linked with that task. Because the new interface is based on xReach.connect, you can connect other systems such as Azure DevOps over the long term.

Clearly structured and user-friendly optimized workflow for your processes

The workflow features premium usability: Processes and process elements are synchronized in the portal. Users can access Symbio from any level of the project portal and, for example, open the process to which the requirement or task has been allocated.

Also, Symbio factors in the current status: If processes typically are not synchronized until they have been approved, the process also can be traced in the portal. This means that these elements remain visible in the system but in a "deactivated" form. Once reactivated in Symbio, the element automatically is activated in the project portal as well.

Why Hitachi Solutions?

Hitachi Solutions is one of the largest, most qualified and highly experienced Microsoft Dynamics consulting firms across the globe, capable of handling complex tier-one displacement projects. Our company's calibre of expertise and commitment to customers is evidenced through our consistent recognition from both Microsoft and industry analysts.
