

Unlocking the Value in your Data

If you're looking to maximise the return on investment from data, analytics and AI, it's much more than a question of choosing the right technology. Hitachi Solutions' Data & Analytics Assessment can ensure you're on the right path with a pragmatic and practical approach to mapping out your data strategy.

The Hitachi Solutions **Data & Analytics Assessment** helps our customers deliver the foundations essential for executing a successful data strategy. Our comprehensive approach considers uses of data and analytics throughout your organisation and helps you set out a roadmap to deliver more value from your data.

We take a business value led approach when developing data strategy and typically recommend transformational initiatives across 4 key themes:

Process & Governance

Organisation and People

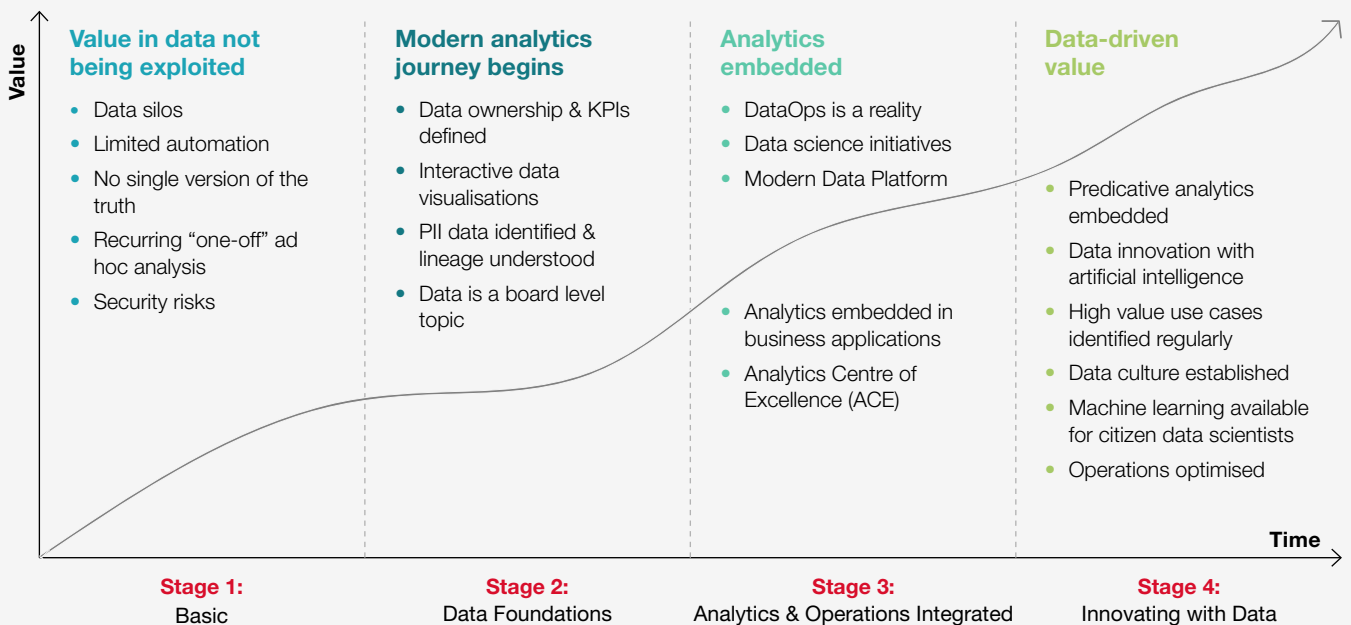

Technology

Information & Data

This helps our customers manage data risks, establish control and governance over data and continue on their journey to become more data-driven.

01 — We start by benchmarking data maturity against industry best practices to establish a baseline to measure improvements.

02 —

Next we co-create a data strategy and roadmap to realise the benefits from using of data and analytics more effectively.

When put into action, an effective data strategy will help deliver data-driven culture, **supporting business as usual** with descriptive and diagnostic analytics and **driving business change** through predictive and prescriptive analytics with machine learning & artificial intelligence.

Key points

-  Based on “Design Thinking” envisioning principles
-  Designed to facilitate discussion around a known business issue
-  Facilitated by our senior team and industry experts
-  Business value led

How Hitachi Solutions can help

We pride ourselves on being a team of dedicated problem solvers. We listen to your business needs and develop innovative end-to-end solutions that empower your business for a sustainable future.

We have a wealth of data & analytics experience to help you define your data strategy and deliver your data-driven transformation.

Discovery Workshop

(1 Day)

We'll blend the “**art of the possible**” with the “**science of the possible**” to help align all stakeholders to the challenges and business value of better data.

Deliverables

A high-level roadmap and vision played back to stakeholders from the workshop's business value assessment.
