Hitachi Solutions ✕ ▦ Microsoft

Get the most out of your IT Applications with Microsoft Copilot

Why choose Hitachi Solutions to help with **your Copilot journey**

What is Copilot? When should I use it? How much time and cost will it save me? Here at Hitachi Solutions, we're here to help you answer these key questions. We understand that your industry is unique, and so is your organisation, and before we dive into the exciting possibilities enabled by Microsoft's latest technology, we focus on what you need from Copilot, and what you want to achieve. We have a comprehensive selection of activities to help you get started, depending on where you are with your AI and Copilot journey.

Hitachi Solutions Copilot Offerings

Kickstart

Our two-day interactive workshop blends comprehensive learning with hands on sessions, where we'll use real-world examples to demonstrate how you can leverage the benefits of AI and Copilot.

Benefits & Outcomes

⊘ Education on Generative AI and Copilot solutions.

⊘ Identifying AI use cases tailored to your business needs.

⊘ Understanding blockers and pathways to AI use case development.

Prototype to Copilot

This comprehensive engagement extends beyond initial prototyping to develop fully functional AI solutions tailored to your business.

Benefits & Outcomes

We guide you through establishing the internal governance models and structures necessary for building, deploying, and managing Copilot solutions to a production environment.

Design Sprint

This five-day AI design sprint builds on the foundations of the Copilot Kickstart workshop where you'll create a working prototype.

Benefits & Outcomes

⊘ This sprint empowers you to create deployable solutions while maintaining a strong focus on responsible and ethical AI.

⊘ Transform your ideas into actionable prototypes, ensuring practical and impactful Copilot integration within your organisation.

Copilot Centre of Excellence

Scale your Copilot implementation with our mature CoE offering for business applications.

Benefits & Outcomes

⊘ Ensuring Copilot development can be integrated to mitigate application/licensing sprawl/data loss and security vulnerabilities.

⊘ Helping customers enable their business teams to ideate, prototype and develop Copilot solutions to be deployed and shared across the business in a controlled environment.

Our Copilot Customers

We've worked with many organisations across various industries to help them find efficiencies using Copilot, below lists some of the valuable outcomes we've helped to deliver.

| Who	Problem	Aim	Solution
Central Government, Environment Copilot	With a vast set of data across multiple sources, finding information in a SharePoint repository would normally take hours.	Leverage data with a digital assistant to create content from existing sources, such as Permit or Report documents.	Integrate data sources such as the Thames Water API and Weather data with proprietary data to create rich conversational experiences with a chat bot.
Charity Copilot	Donors often struggled to find portfolios of charities based on their social value requirements, which often caused manual work to curate lists of charities to meet Donor needs.	Drastically reduce operating time for team members curating charities based on Donor needs.	Augmented data combining proprietary verified business data and real time updates on latest events and activities around charities. Use of Azure speech to support donors with accessibility requirements.
Crime Reporting Copilot	Crime classification is currently a manual process recorded by Crime officers, based off their knowledge of the Home Office crime classification document, which is arduous and error prone.	Quickly identify and classify crime counts based on crime summary, using a 400-page reference document.	Provide crime classifications scoring automatically based off a narrative submitted by Case Officers to support case write-up.
